Why Roqqett

By integrating directly with UK banks to cut out cards, we are the best checkout solution for your e-commerce business. 3

Integration

Designed to be simple. Built to be fast. The Roqqett checkout can be integrated with a few lines of code. 4

Strong Customer Authentication

Built using Open Banking technology, Roqqett inherently applies SCA to ensure your online business checkout is future-proofed. 5

Satisfy all business needs

Roqqett is the first checkout to offer advantages across technology, finance and marketing. 6

How Roqqett Checkout Works

Preview how Roqqett's unrivalled checkout experience will work for your customers. 7

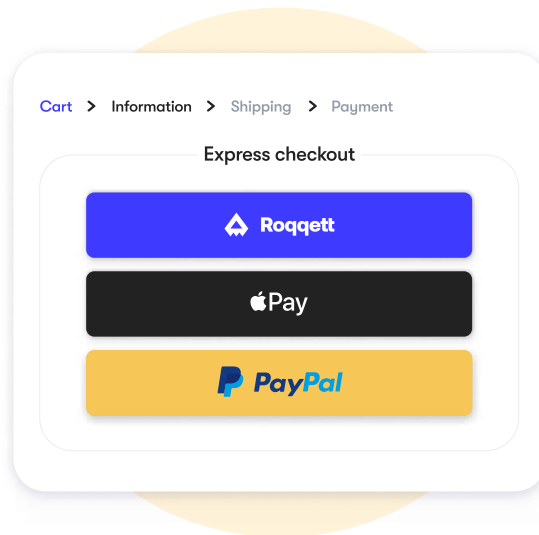

Coming soon...

A sneak peek of what Roqqett is currently working on to become the go-to app for online shopping. 8

Why Roqgett Checkout

Roqgett has built the next-generation e-commerce checkout that boosts sales through faster conversion, increased cash flow and lowers costs.

Increase conversion

Customers can checkout in fewer taps by using a banking app instead of cards.

Faster checkouts lead to better conversion and less dropout.

Grow the bottom line

No cards mean no card fees and lower fraud risk as Roqgett does not hold any of your money.

Roqgett uses next-generation payments, which help you save ~74% on transaction fees.

Improve cash flow

No cards mean no chargebacks, allowing you to keep more of your profits.

Earn interest on funds that would otherwise be with your acquirer.

Designed to be simple. Built to be fast.

Roqqett has been designed to feel like a step into the future.
An intuitive experience that keeps customers coming back.

> Simple to integrate

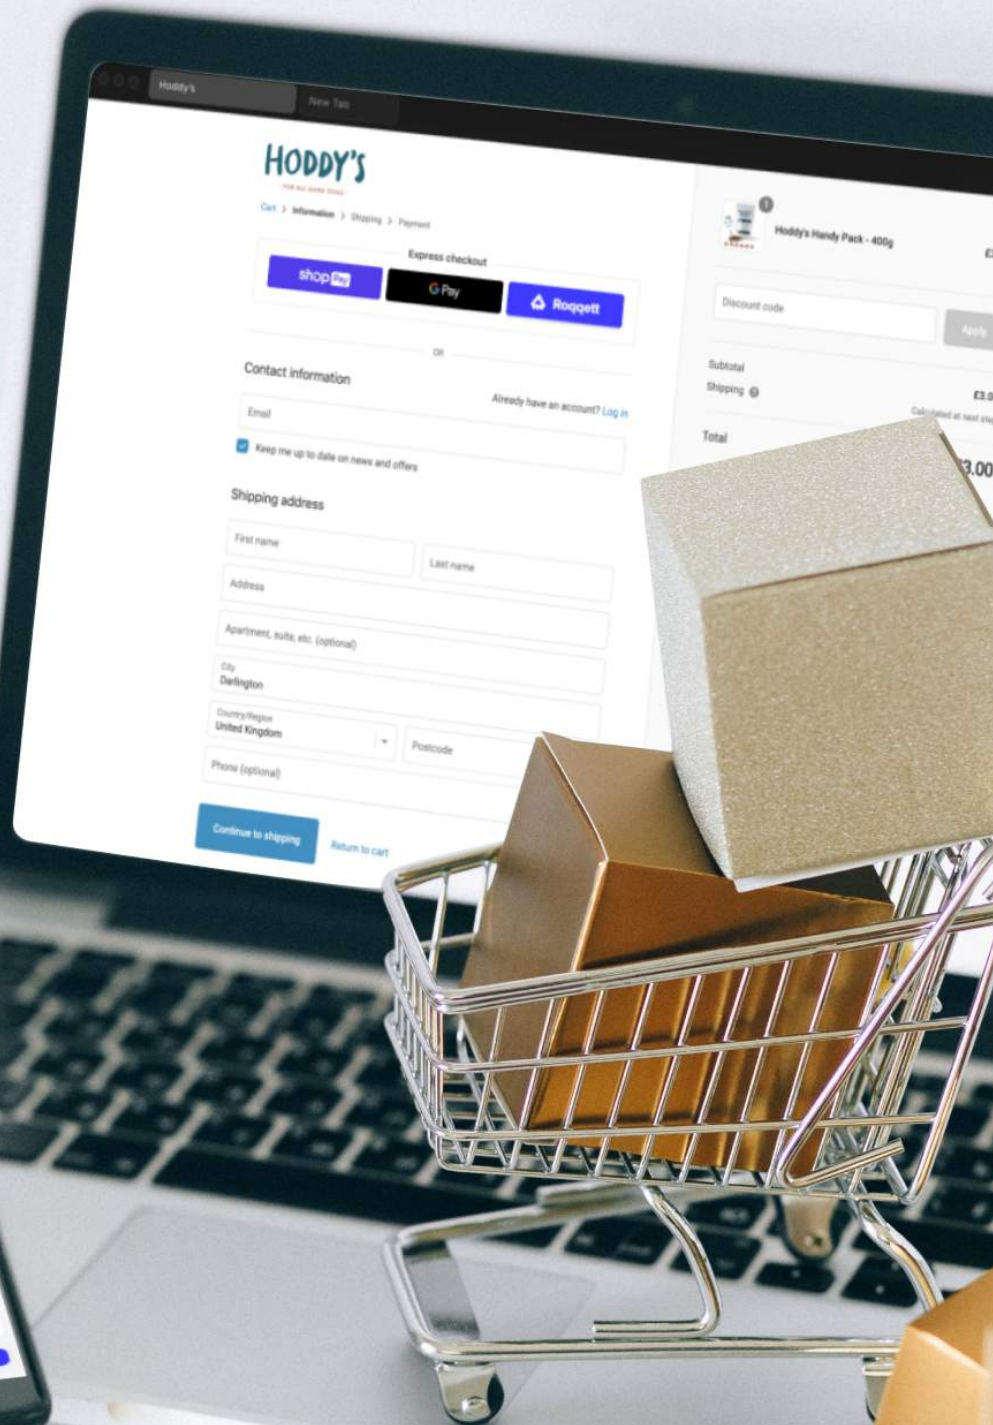

Built using Open Banking technology, Roqqett is simpler to integrate than any card payment method.

> Reduced Fraud

Customers do not need to share any of their bank details to checkout. They can simply authenticate using their banking app which reduces fraud and makes Roqqett Checkout safer than bank cards.

Roqqett

Future-Proof your checkout.

Roqgett has been designed with Strong Customer Authentication at its very core.

> The law is changing

Starting from March 2022, all UK businesses will be required by law to enforce Strong Customer Authentication (SCA) when taking online payments.

To be considered strong, authentication must include at least two of the following: **knowledge**, **possession** and **inherence**.

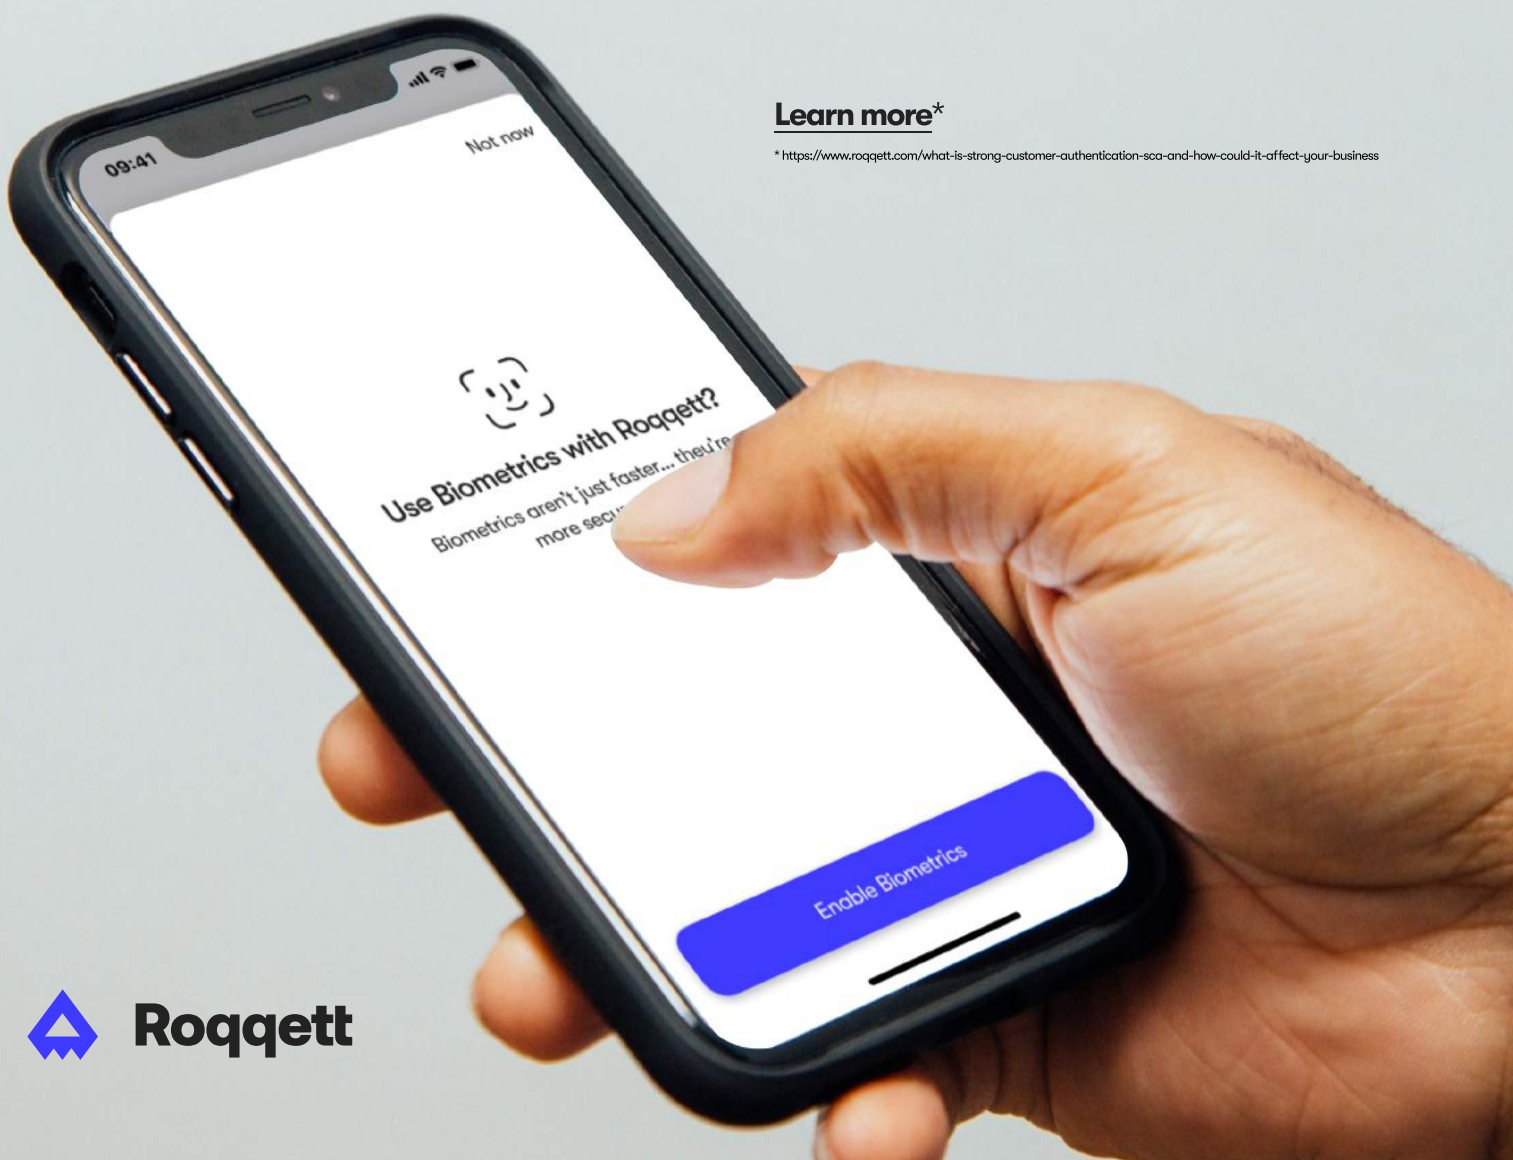

> Get future-proofed

SCA adds friction to your checkout by requiring additional steps. Roqgett inherently solves this by replacing cards at checkout with your customers' mobile phones, creating a seamless UX.

With Roqgett customers can safely checkout by authenticating payments with their banking app using their mobile phone (**Possession**) and biometrics (**Inherence**).
